

Automated Ubuntu Installation Instructions

Follow these steps to install Ubuntu with OnlyOffice, Okular, and Thunderbird automatically:

1. Download the latest Ubuntu Desktop ISO from <https://ubuntu.com/download/desktop>.
2. Use a tool like Rufus (Windows), balenaEtcher, or Startup Disk Creator to write the ISO to a USB stick (8GB or larger).
3. Copy the `autoinstall` and `ansible` folders from this repository to the root of the USB stick.
 - The USB should now contain:
 - The Ubuntu ISO
 - The `autoinstall` folder (with `user-data.yml` and `meta-data`)
 - The `ansible` folder (with `playbook.yml` and `hosts`)
4. Rename `user-data.yml` to `user-data` (no extension) if required by your Ubuntu version.
5. Plug the USB stick into the target computer and boot from it.
6. The installation will run automatically. When finished, the system will have:
 - Username: suitit
 - Password: suitit
 - OnlyOffice, Okular, and Thunderbird pre-installed

No manual steps are required during installation. Its a fully automated process.
